

De Gaulle's Principles of Teaching and Healthcare, and Hospital Management, even
Doctor Advising -
By De Gaulle (1979)

- I. Reflect De Gaulle's Biographical Leadership compare him to Nehru or Fidel - It Doesn't Matter

De Gaulle is an efficient planning and management leader who then is also in a major crisis in Europe without leaders and crisis ridden economic planning by EU which keeps divining Hegel instead of Marxism which De Gaulle defends but with liberalism - so the method, communist, liberal and capitalist with a scientific attitude respectful to theologies of all and even Black rights supporting.

- II. De Gaulle's Notes on Hospitals - called Three Paragraphs Science by Soviet Union on Sirohi, a future biographer of De Gaulle and philosopher
 - A. What is philosophy - is it relevant at all, a cheap discipline to pick up which can inform the common mind of all subjects, I call this perfect.
 - B. What is Marxism - a failed science but also working rigour towards science integrating theology.
 - C. How to manage a hospital - just apply a plan - now I love this idea of a toy - imagine a toy and model it.

A Toy I love - a beautiful house model which is Le Corbusier - buy this or draw it out but not architecture, which is too advanced, a toy called a toy or model -

Now compare each aspect - I call this functionalism.

Now reflect teaching principles - the modern period I argue from Hegel is more divine than the ancients.
